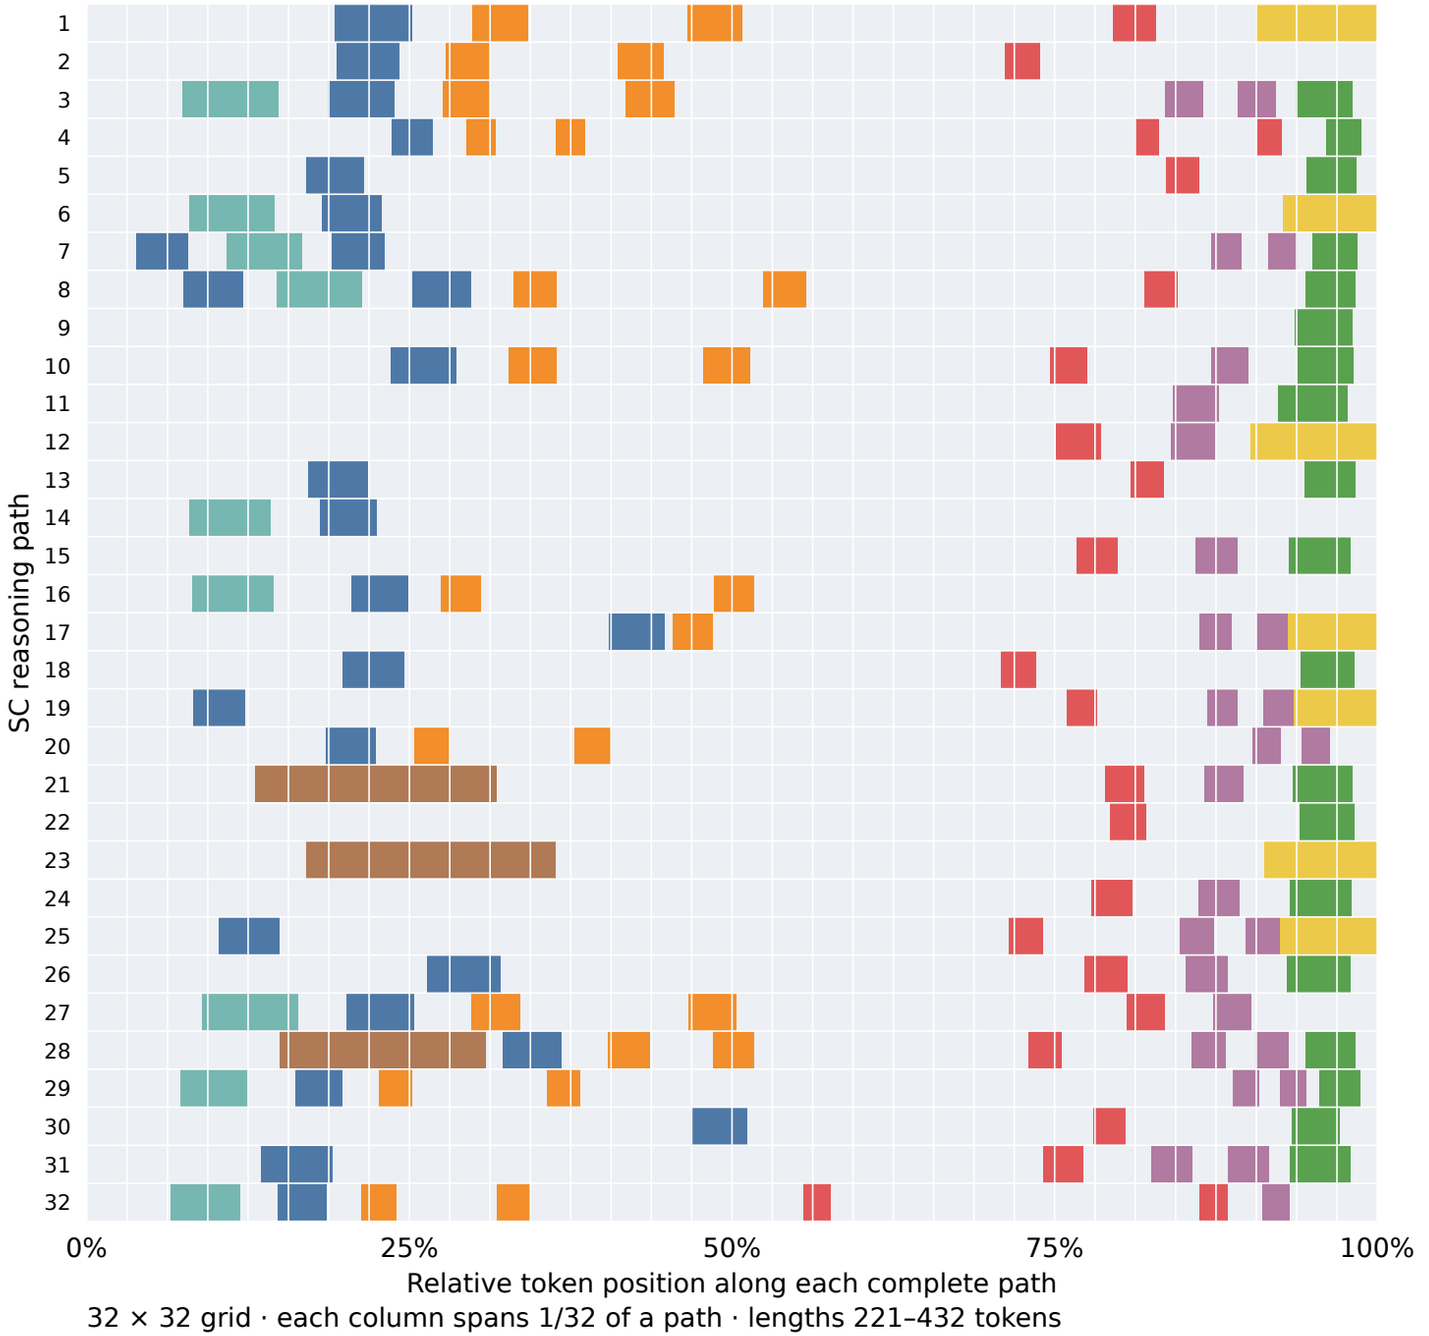
Repeated token fragments

Llama-3.1-8B-Instruct · GSM8K · gsm8k_0909 · 32 independent SC paths



Same color = same fragment

- 's age eight years ago was two times Adam's age four years ago
  14 tokens · 24/32 paths
- - 8 = 2(A - 4
  10 tokens · 13/32 paths
- Adam will be 38 years old in 8 years.
  12 tokens · 19/32 paths
- 's age in 8 years =
  8 tokens · 18/32 paths
- find Adam's age in 8 years
  8 tokens · 21/32 paths
- years ago as D - 8 and Adam's age four years ago as A - 4.
  20 tokens · 9/32 paths
- 38 So, in 8 years, Adam will be 38 years old. \boxed{38}
  22 tokens · 7/32 paths
- D = 60. 2. Eight years ago, Duncan's age was D - 8 = 60 - 8 = 52. 3. Four years ago, Adam's age was A - 4. 4...
  49 tokens · 3/32 paths

Gray = outside displayed fragments
Colors apply only within this example.

32 × 32 grid · each column spans 1/32 of a path · lengths 221–432 tokens

Subcell color boundaries preserve token positions. Equal horizontal widths need not contain equal token counts across paths.

Exact matches of at least 8 tokens; up to 8 disjoint fragment types shown. Wording overlap alone does not establish reusable computation.
